

# Probability Assignment 3

EE22BTECH11217 - Sayan Biswas

## 1 PROBLEM STATEMENT

A box contains 5 red marbles, 8 white marbles and 4 green marbles. One marble is taken out of the box at random. What is the probability that the marble taken out will be

- 1) red
- 2) white
- 3) not green

## 2 ANSWER

- Number of red marbles = 5
- Number of white marbles = 8
- Number of green marbles = 4
- Total marbles =  $5+8+4 = 17$

$$N = R + W + G \quad (1)$$

$$n = r + w + g \quad (2)$$

Where R,B,G represent the total number of red, white and green marbles and r, b, g represent how many of them were picked respectively

$$\Pr(r, w, g) = \frac{{}^R C_r {}^W C_w {}^G C_g}{{}^{R+W+G} C_{r+w+g}} \quad (3)$$

- 1) Probability that the marble taken out is red

$$\Pr(1, 0, 0) = \frac{{}^5 C_1 {}^8 C_0 {}^4 C_0}{{}^{17} C_1} \quad (4)$$

$$= \frac{5}{17} \quad (5)$$

- 2) Probability that the marble taken out is white

$$\Pr(0, 1, 0) = \frac{{}^5 C_0 {}^8 C_1 {}^4 C_0}{{}^{17} C_1} \quad (6)$$

$$= \frac{8}{17} \quad (7)$$

- 3) Probability that the marble taken out is not green

$$1 - \Pr(0, 0, 1) = 1 - \frac{{}^5 C_0 {}^8 C_0 {}^4 C_1}{{}^{17} C_1} \quad (8)$$

$$= 1 - \frac{4}{17} = \frac{13}{17} \quad (9)$$
