Question: The probability that at least one of the events A and B occurs is 0.6. If A and B occur simultaneously with probability 0.2, then  $Pr(A\prime) + Pr(B\prime)$  is

- (A) 0.4
- (B) 0.8
- (C) 1.2
- (D) 1.6

Solution: : Given,

$$Pr(A+B) = 0.6 \tag{1}$$

$$Pr(AB) = 0.2 \tag{2}$$

$$Pr(A + B) = Pr(A) + Pr(B) - Pr(AB)$$
(3)

$$0.6 = \Pr(A) + \Pr(B) - 0.2 \tag{4}$$

$$\implies \Pr(A) + \Pr(B) = 0.8 \tag{5}$$

$$1 - \Pr(A') + 1 - \Pr(B') = 0.8 \tag{6}$$

$$\therefore \Pr(A') + \Pr(B') = 1.2 \tag{7}$$
